

## Double talk masks developer-friendly moves

### *Ford's plan for sprawl*

“When the general atmosphere is bad, language must suffer,” noted George Orwell seventy-five years ago. “But if thought corrupts language, language can also corrupt thought.”

These words have been repeatedly proven true since 1946, often in government attempts to throw a shroud over lies and measures promoting their political backers. So it is that the Ford government has tried to explain policies that encourage urban sprawl, eroding Ontario's greenbelt and destroying climate friendly wetlands, with the claim that it is “cutting red tape” to ease the building of new industries as well as facilitating “housing that people can afford.” Its new “land needs assessment methodology”<sup>1</sup> for the Greater Golden Horseshoe region and beyond pressures municipalities into increasing urban sprawl for the next thirty years.

Ford's developer-friendly Growth Plan calls for low population density plans that will eat up more rural land for workplaces and housing. In the Golden Horseshoe Region alone, the Plan will create more sprawl by demanding that four-fifths of population growth take place in suburban areas. It forces municipalities, by July 2022, to

review official plans and lock in land use until 2051. The Plan offers little or no consultation with Indigenous peoples. As reported by the Ontario Auditor General (in late 2021), the Plan has been reinforced by provincial Ministerial Zoning Orders (MZOs) that this government uses to fast track development and sprawl. In just two years the Ford government handed down 18 orders that eliminated two thousand acres of farmland.<sup>2</sup>

## ***The costs***

Ford's sprawl plan means the elimination of wetlands, green spaces and much needed farmland. It will promote expensive highway construction while encouraging commuting by private vehicles. It will undermine public transit by moving people away from transit routes. It will degrade groundwater reserves and worsen flood threats just as climate breakdown generates intense downpours and more flooding. It will weaken links between urban centres and nearby food production. All this to enrich land speculators and developers.

Urban sprawl, with its destruction of wetlands, forests and farmland, and its codependency with highways and single-user vehicles, is exactly the wrong way to go. It is not climate mitigation. It promotes climate breakdown.

It is already too late for some municipalities. In February 2021, Ottawa City Council voted for 40 percent more growth through sprawl. In October, York Region approved a plan that will see almost all the Region's remaining land swallowed up for new housing.

Yet other municipalities and citizen groups are fighting back. In November

2021, with widespread support from climate activists and the broader community, Hamilton Council voted against plans by staff -- directed by the province -- to convert 3300 acres of agricultural land to urban uses. The council supported an alternative growth scenario that preserves farmland and chooses greater urban density within firm boundaries.<sup>3</sup> The same month councillors in the Region of Waterloo, also with widespread community support, rejected staff planning recommendations that had reflected Ford government pressure to expand sprawl outside established boundaries. Council called for scenarios to maintain those boundaries.

## ***The People and Climate First alternative***

Land use planning that is based on the needs of people – and the climate on which all species depend -- would accommodate housing and workplace growth within existing municipal boundaries. Such planning would include commitment to brownfield redevelopment, expanding and intensifying density around public transit lines. It would prioritize urban centres ('15-minute communities') in suburbs. It would be a land-use plan to address the climate breakdown emergency. It would not be planning aimed at lining the pockets of speculators and developers.
