

Call for a Ceasefire of Attacks on Iran

As environmentalists, we cannot stay silent about the unprovoked attack on Iran by two nuclear-armed states. The dangers of this war escalating and drawing in other powers is increasing by the hour.

Thousands of innocent people are being killed. The bombing of oil storage sites is producing toxic smoke, that will continue to poison the environment decades after the active war has ended,

The attacks on Iran by the U.S. and Israel are illegal acts of aggression that violate International Law. This will only increase international tensions and lead to more violence. Blatant disregard for diplomacy endangers all humanity.

We are very concerned about PM Carney's stated support of the initial military strikes, including the possibility of Canadian troops participating in action. While Carney has admitted that it might be breaking international law, his response amounts to an endorsement of Israel and U.S. aggression.

We call for Canada to demand an immediate ceasefire.
