# ACTION ALERT:

# Doug Ford's nuclear plans are wasting our money and precious time

***When making a major purchase, wouldn't you consider the alternatives?***

Doug Ford wants us to build him a 10,000 megawatt, the "World's Largest", nuclear plant on the shores of Lake Ontario in Port Hope (New Nuclear at Wesleyville)...without considering renewable energy alternatives.

It will cost us at least $160 - $230 billion. It won't be completed until 2048. Until then, more of our electricity will come from toxic fossil gas. We could get the same amount of electricity from renewable sources more quickly for a lot less.

Also, the Ford government tipped the balance in Ontario's energy planning law to give preference to nuclear reactors - the most expensive generator of electricity.

There are many reasons to oppose Ford's nuclear plans. Read about Ten Reasons from SCAN!'s Ontario Project here. The Ford government has set us on a high cost energy pathway, and is sending us backwards in the fight against the climate crisis.

SENIORS for CLIMATE ACTION NOW!

**Tell Premier Ford and Stephen Lecce, Ford's Energy Minister, to**

- ✓ **get nuclear out of Ontario's energy laws and plans and**
- ✓ **change course and invest our money in renewable energy - wind, solar and energy storage.**

**Send a letter to Premier Ford and Stephen Lecce.**

Ontarians cannot afford high cost nuclear energy. We can't wait on action to address the climate crisis.
